**Subject:** Student Council Management Program

---

Dear Mr Oz,

Following our recent discussion about a program for Student Council management, I have thought a lot more about how to come up with a viable solution. I looked up whether there were any ready made solutions available, but there appears to be none.

I propose that a mobile app that runs on both iOS and Android is created to manage both Tuck Shop and the overall Student Council Budget. This app would use Student Logins to log in to the app. An advisor would have access to the app to add members or take away members. A central database would be used which can let students access the data.

The tuck shop section would allow on-duty students to use it as a cash register and easily collect money without any mental calculations, decreasing potential error. From this stock alerts could also be created, reminding Student Council when new products need to added.

The budget section would show the overall budget to all Student Council members. Costs could be added to the budget with the approval of a Student Council Advisor and a Student Council member part of the leadership team. What do you think of these ideas?

We are also going to need a name for the app, do any of these jump out to you?

- StuCo Management
- TrackSC
- SC Online

Let me know if you like these or if you have any other ideas.

Developer

Hi Developer,

This is very detailed! Sounds very good. There is one thing that came to my mind though. As you know we also give money to charities taking place in school and/or in foundation. Can this app keep track of that as well? You may considering adding this to your app.

I like the StuCo Management the best, but all sound cool.

Good job!

Keep up the good work!

Best regards

Ozgul Kazanci

Student Council Advisor

Dear Mr Oz,

I am sure that that could be added to the Budget Section. I can add a budget breakdown that will allow use to see what has been donated to charity or spent on events/Tuck Shop.

I will proceed to establish the success criteria and send it to you when ready.

Thanks,

Developer

Hi Mr Oz,

For StuCo Management, I have drawn up the list of success criteria based on your requirements.

Criterion Number	Description
1	Student Council members can be added and removed with levels of accessibility
2	Student Council members have individual logins and passwords
3	Student Council members can access their account from any Android or iOS device using login details
4	Information is synced across devices and accounts
5	Products can be added and removed from the Stock List, only by administrators
6	Information about the product can be added and updated. (Selling Price, Stock, Name)
7	Stock of any Tuck Shop product can be checked at any given time.
8	A Tuck Shop checkout system can be used to calculate totals and update stock inventory and add transactions that can be used by all users
9	A budget section showing the overall budget of Student Council is available
10	Spending and Income can be sectionalised and shown in a graph
11	Non-Checkout Transactions can be added, edited and deleted by administrative accounts

These can be changed to fit your exact needs so please do not hesitate to make comments on any corrections and your initial impressions. I will send you updates throughout the development process.

Thanks,

Developer

Dear Developer,

This looks very good. I hope you can finish it quickly. I am looking forward to testing the version 1.0 already.

Good luck!

Best regards,

Ozgul Kazanci

Student Council Advisor
